## BHRPrintManager...

- ...increases productivity
- ...reduces costs
- ...increases document security
- ...provides management reports
- ...reduces wastage

## BHRPrintManager...

- ...for any system
- ...for any application
- ...for any company!

**BHRPrintManager** is a complete solution for all print management needs. With installation and setup in under 5 minutes, BHRPrintManager provides a high performance addition to any company.

**BHRPrintManager** fits seamlessly into any printing infrastructure, processing jobs from any host system and application - AS/400/iSeries, any Unix, Windows, Macintosh, Mainframe and more.

### Product Benefits

**BHRPrintManager** greatly reduces printing costs by (a) redirecting black & white or greyscale jobs away from a colour printer onto more cost effective black & white printers, (b) directing jobs, over a page number threshold, onto a more cost effective volume printer.

**BHRPrintManager** increases printing accuracy and ROI by sending jobs to a "Print room" allowing experts to generate the jobs. Unwanted jobs can be filtered and incorrect job settings (e.g. printer tray selection) can be altered to virtually eliminate wastage.

**BHRPrintManager** collects printing statistics for all print runs, facilitating queries and cost calculations. Standard reports are provided to display print costs by department/cost centre, by user and by printer. Reports can be easily created and modified.

**BHRPrintManager** generates management statistics for printing practices including ROI/performance figures for printers together with the printing requirements of departments and individuals.

**BHRPrintManager** automatically informs users about the progress of their job. This provides essential visibility of the decisions taken during processing. Any errors resulting from processing are sent to internal support staff.

**BHRPrintManager** maximises the speed of printing by selecting a printer from a defined group, which will produce the job the fastest.

**BHRPrintManager** greatly increases the speed of printing large print runs by splitting output across multiple printers. In this way, multiple slow printers are grouped to form a virtual high-speed printer without the costs.

# ... At the Heart of the Network

**BHRPrintManager** protects business operations and increases the effectiveness of any CRM infrastructure by placing a copy of each job into an archive. Any archive system can be used that has an 'import from file' mechanism.

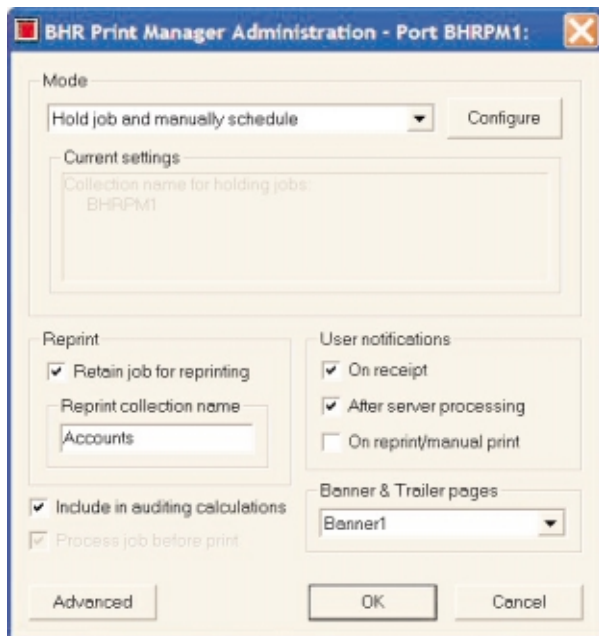

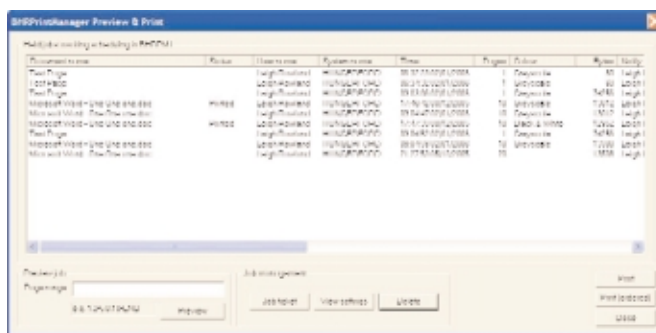

**BHRPrintManager** provides a document approval process for key documents by emailing jobs back to the user after processing to enable proofing, signing etc.

**BHRPrintManager** ensures that all print jobs are printed even if a printer fails through error. By grouping printers together, a failure on one printer results in subsequent jobs being moved onto other error free printers in the group.

**BHRPrintManager** provides an effective insurance policy for all business documentation by storing a copy of every job ready for reprinting. When reprinting, it only re-sends those pages that are needed.

**BHRPrintManager** allows users to define all processing requirements for each print job as they print. This 'job ticket' style of printing can be used to request any printing/finishing feature including binding type, stitching & stapling, trimming, postage type and laminating, etc.

For a more technical overview of the product, see the [BHRPrintManager Technical Brochure](#).

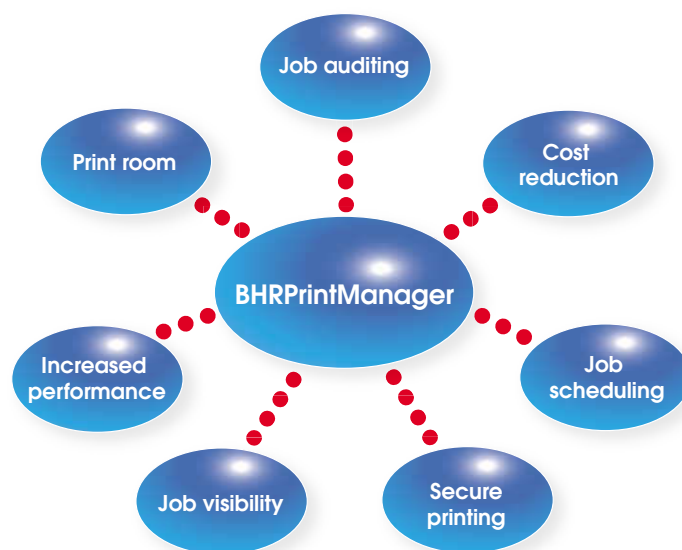

**BHRPrintManager** enables user 'hot desking' by automatically sending jobs to the print queue local to each user. This mechanism results in significant simplification of the printing infrastructure, greatly helping support staff.

## About BHR Business Solutions

BHR Business Solutions is a global technology solution provider working with domestic and global companies on document output management and data integration solutions. BHR Business Solutions has a wealth of experience in combining off the shelf products with custom written software to resolve key business issues.

These projects range from printing solutions, electronic forms, document output management and archiving to bill presentment and payment and wireless warehouse systems. Projects have been carried out on a wide variety of application platforms (Windows, OS/400, VMS, UNIX etc.) and technologies. Our consultants, using their wealth of knowledge, work together with your IT teams to help define company strategic direction and technology implementation plans. A portfolio of in-house products such as BHRPrintManager and richPDF are combined with third party offerings to provide the basis for many solutions.
